■ Pulse withstanding capacity

The single impulse graph is the result of 50 impulses of rectangular shape applied at one-minute intervals. The limit of acceptance was a shift in resistance of less than 1% from the initial value. The power applied was subject to the restrictions of the maximum permissible impulse voltage graph shown.

CSR Series Single Pulse(100 Ohm)

**Continuous Pulse**

The continuous load graph was obtained by applying repetitive rectangular pulses where the pulse period was adjusted so that the average power dissipated in the resistor was equal to its rated power at 70°C. Again the limit of acceptance was a shift in resistance of less than 1% from the initial value.

**CSR Series Continuous Pulse(100 Ohm)**

**CSR Series Pulse Voltage(100 Ohm)**

**Lightning Surge**

Resistors are tested in accordance with IEC 60115-1 using both 1.2/50 $\mu$ s and 10/700 $\mu$ s pulse shapes. The limit of acceptance is a shift in resistance of less than 0.5% from the initial value.

**1.2/50 $\mu$ s Lightning Surge**

**10/700 $\mu$ s Lightning Surge**
